Abstracts

The global Golf Rangefinder market was valued at 84.8 Million USD in 2021 and will grow with a CAGR of 6.57% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A golf rangefinder is a handheld device that uses different technologies to track the distance between the club and the flag. It is mostly used with a camera or a gun. The two types of rangefinders are laser golf rangefinders (uses laser beam technology) and GPS golf rangefinders (uses GPS technology).The approval of DMDs in golf tournaments will have a positive impact on the market's growth during the next few years. To enhance the experience of the game, the golf-governing bodies have allowed the use of DMDs if the local community rules allow it. This rule defined by local committees on the use of DMDs allows the limited use of laser and GPS rangefinders on smartphones. However, the devices are limited to be used only for measuring the distance but not slope, wind speed, or club recommendations, in turn, creating several business opportunities for golf equipment manufacturers. This, in turn, driving the need for golf distance finders market and laser golf rangefinders market.
