Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Graphene is a sheet of carbon atoms bound together with double electron bonds (called sp² bonds) in a thin film only one atom thick. The atoms in graphene are arranged in a honeycomb-style lattice pattern. Graphene is the basic structural element of several forms of carbon, including graphite, carbon nanotubes, and fullerenes. Graphene is one million times thinner than paper, nearly transparent, and believed to be the strongest material in the world. According to our survey, the sales value global graphene market has reached about 2021.05 K USD in 2015, and is expected to reach 10336.44 K USD by 2021. North America was the largest market of graphene, in terms of production from 2011 to 2014, according for about 70.62%% in 2014. While in 2015, with the downstream demand growth significant in China, the production of graphene has exploded from 484 KG in 2014 to 5540 KG in 2015, which made China replaced USA, be the number one.
