An asphalt paver is a machine used to distribute, shape, and partially compact a layer of asphalt on the surface of a roadway, parking lot, or other area. Some pavers are towed by the dump truck delivering the asphalt, but most are self-propelled. Self-propelled pavers consist of two major components: the tractor and the screed. The tractor provides the forward motion and distributes the asphalt. The tractor includes the engine, hydraulic drives and controls, drive wheels or tracks, receiving hopper, feeder conveyors, and distribution augers. The screed levels and shapes the layer of asphalt. Asia-Pacific has the largest market share in 2017 which account for 47.95%, and will be steadily increase due to the strong demand of the road construction in emerging economies like China, India and Southeast Asia regions. North America hold a market share of 21.96% will still play an important role which cannot be ignored. Any changes from North America might affect the development trend of Gravel Paver. Europe also play important roles in global market, but it will witness the comparatively lowest growth rate within selected regions.
