Halloysite is an aluminosilicate clay mineral with the empirical formula $\text{Al}_2\text{Si}_2\text{O}_5(\text{OH})_4$. Its main constituents are aluminium (20.90%), silicon (21.76%) and hydrogen (1.56%). It is a member of the kaolinite family of aluminosilicates but, whereas kaolin particles are platy in shape, halloysite particles are nanotubes, where the aluminosilicate sheets are rolled up like a scroll. Regionally, halloysite production sites are mainly distributed in four regions, such as North America, Europe, Oceania and China. In 2017, Oceania is the largest production region, with revenue of 14.18 million USD. Europe is the second largest sales region.
