A hand-held slit lamp is a kind of portable ophthalmic instrument. It's a high-intensity light source often used in optometry and ophthalmology practices. It is often used with a biomicroscope to do an examination of the eyes. These lamps allow light to penetrate the eye and give the clinician or doctor an illuminated view of the anterior and posterior segments of the eye. Hand-held slit lamp is mainly in the field such as ophthalmology and veterinary hospital. According to our investigation, hand-held slit lamp is not an essential equipment for every ophthalmology hospital, compared with the table top slit lamp. In some situations where the table top slit lamp is not available or not convenient to use, hand-held slit lamps are needed.
