The global HCFCs market was valued at 724.72 Million USD in 2021 and will grow with a CAGR of 6.27% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Hydrochlorofluorocarbons, commonly known as HCFCs, are a group of man-made compounds containing hydrogen, chlorine, fluorine and carbon. They are not found anywhere in nature. HCFC production began to take off after countries agreed to phase out the use of CFCs in the 1980s, which were found to be destroying the ozone layer. Like CFCs, HCFCs are used for refrigeration, aerosol propellants, foam manufacture and air conditioning. While many HCFCs are in the list of controlled substances, only HCFC-22, -123, -124, -141b and -142b are consumed in significant quantities. HCFCs downstream is wide, the major fields are air-condition, refrigerator blowing, agent chemical intermediate material, etc. In recent years, due to damage to the environment freon achilles heel, the EU implemented a policy of air condition without fluoride in early 2004, especially in USA and Europe. So the production of HCFCs reduces year by year. Currently, the international fluoride ban has become China`s largest air-conditioning outlet green barriers.
