Diaphragm Valves (or membrane valves) consists of a valve body with two or more ports, a diaphragm, and a seat upon which the diaphragm closes the valve. The valve is constructed from either plastic or metal. Health Diaphragm Valves have the reputation of being the "clean valves". The health diaphragm isolates the process media from the environment and all moving parts of the valve and so protecting the media from contamination while preventing it from interfering with the valve operation. The properly chosen diaphragm also provides exceptional steam resistance and long term durability. The global average price of Health Diaphragm Valves is in the decreasing trend, from 124.7 USD/Unit in 2013 to 117 USD/Unit in 2017. With the situation of global economy, prices will be in decreasing trend in the following five years. The classification of Health Diaphragm Valves includes manual, pneumatic, electric and others, and the proportion of pneumatic in 2017 is about 49%. Health Diaphragm Valves is widely used in food industry, pharmaceutical industry, biotechnology and other field. The most proportion of Health Diaphragm Valves is pharmaceutical industry, and the revenue in 2017 is about 45%.
