## **Abstracts**

The global Heat Pipe market was valued at 233.27 Million USD in 2021 and will grow with a CAGR of 4.31% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact wwhich will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market verdors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A heat pipe is a closed evaporator-condenser system consisting of a sealed, hollow tube whose inside walls are lined with a capillary structure or wick. Thermodynamic working fluid, with substantial vapor pressure at the desired operating temperature, saturates the pores of the wick in a state of equilibrium between liquid and vapor. When heat is applied to the heat pipe, the liquid in the wick heats and evaporates. As the evaporating fluid fills the heat pipe hollow center, it diffuses throughout its length. Condensation of the vapor occurs wherever the temperature is even slightly below that of the evaporation area. As it condenses, the vapor gives up the heat it acquired during evaporation. This effective high thermal conductance helps maintain near constant temperatures along the entire length of the pipe. The Heat pipe industry is fragmented. A variety of manufacturers ranging from large multinational corporations to small privately owned companies compete in this industry. The top five producers account for about 23.43% of the revenue market in 2016. Asia-Pacific occupied 42.27% of the revenue market in 2016. It is followed by North America and Europe, which respectively have around 23.11% and 21.10% of the global total industry. Other regions have a small amount of revenue. For price trend analysis, a key variable in the performance of heat

pipe producers is raw material costs, specifically the speed at which any increase can be passed through to customers. The price of the major raw material varies according to the steel price. This year, as the downturn of consumer electronics industry, the Heat pipe price would keep decreasing for at least the following 5 years.
