Abstracts

The global Heat Recover Steam Generator market was valued at 2062.79 Million USD in 2021 and will grow with a CAGR of 3.92% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A heat recovery steam generator or HRSG is an energy recovery heat exchanger that recovers heat from a hot gas stream. It produces steam that can be used in a process (cogeneration) or used to drive a steam turbine (combined cycle). Globally, the HRSG industry market is not that concentrated as the manufacturing technology of HRSG is relatively much more mature than some high-tech equipment. But some enterprises are still well-known for the wonderful performance of their HRSG and related services. At the same time, some countries such as South Korea, Italy and USA are remarkable in the global HRSG industry because of their market share and technology status of HRSG. The consumption volume of HRSG is related to downstream industries and global economy. As there will always be some uncertain in the global economy in the following years, the growth rate of HRSG industry may not keep stable. But it is surely forecasted that the market of HRSG is still promising. The product average price declined in the past few years due to the market competition, the average price will keep the trend in the few future years due to most of Chinese manufacturers will enter the industry. The key drivers identified in heat recovery steam generator market are the growing need for energy efficient sources, allocation of government incentives for

achieving better energy efficiency levels, reduction in carbon emissions, proposed investment plans in energy sector by government and major companies. However, high capital cost and limited product differentiation are the key challenges faced by manufacturers in heat recovery steam generator market. Although the market competition of HRSG is fierce globally, there are many enterprises can obtain considerable profit from the manufacturing and marketing of HRSG and that is the reason that we believe there will also be enterprises enter this market. But it is suggested that enterprises those have plans to enter this industry have careful analysis of this market and the advantages or disadvantages of themselves.
