Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Heat Stress Monitor (HSM) is an essential tool for occupational and environmental health and safety (OEHS) professionals to measure radiant temperature, dry bulb ambient temperature, relative humidity, wind speed, and air pressure parameters that affect heat stress in various conditions from industrial workplaces to underground mines. The Americas is expected to hold the largest share of the heat stress monitor market by 2025. The Americas is the leading region in terms of the adoption of heat stress monitor technology; this is due to several health and safety awareness programs introduced by the US and Canadian governments. These governments have regulations that support the market for occupational safety equipment, which is the major driver for the growth of the heat stress monitor market. Moreover, there is a growing demand for heat stress monitors in sports and athletics, and military, which, in turn, contributes to the growth of the heat stress monitor market. Heat stress monitor is gaining a lot of traction as it is an essential tool for occupational health and safety officers to evaluate work locations and verify that environmental conditions including humidity, airflow, and temperature are effective and appropriate for the prevention of heat stress.
