Abstracts

The global Heating, Ventilation and Air Conditioning (HVAC) Systems market was valued at 9671.01 Million USD in 2021 and will grow with a CAGR of 2.22% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Heating, Ventilation, And Air Conditioning (HVAC) Services include installation, replacement, maintenance, and repair services. HVAC systems are meant to give comfortable air conditions in residential or commercial set-ups and provide thermal balance. The basic function of HVAC equipment is to perform heating and cooling functions and ventilation of air. The increasing energy efficiency of HVAC systems will drive the growth prospects for the global HVAC air filter market until the end of 2020. One of the major factors responsible for the large amount of greenhouse gas (GHG) emissions worldwide is the high percentage of electricity consumed by residential and commercial buildings. For instance, in the US, residential and commercial buildings consume approximately 70% of the overall electricity and generate 40% greenhouse gas emissions. It has been observed that about one-third of the energy consumed by commercial buildings is utilized for ventilation and space heating or cooling applications of HVAC systems. As a result, the trend of lowering energy consumption has been gaining traction among end-users. To reduce a motor's energy consumption, the fan motor in HVAC systems has to overcome resistance to deliver the required air flow. This

compels the manufacturers to focus on the development of air filters that offer lower resistance to air flow.
