Abstracts

The global Helical Screw Blowers market was valued at 701.05 Million USD in 2021 and will grow with a CAGR of 4.88% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A Helical Screw Blower is a positive displacement rotary machine, consisting a pair of intermeshing rotors, which are also known as: male and female rotors. These rotors move towards each other as the volume trapped between them and the housing decreases. Screw Blowers are more advanced compared with traditional roots style blower. Their profile resembles a helical screw which assist an engine producing exceptional horsepower. Roots or lobe type blower suffered poor efficiency compared with screw blowers as no internal compression taking place during the 360-degree rotation cycle, resulting in lower efficiency. Thus, rotary screw blowers hold substantial potential as a replacement to the roots blowers in the future years.
