The global Hereditary Angioedema market was valued at 1674.4 Million USD in 2021 and will grow with a CAGR of 7.08% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Hereditary angioedema is a rare disease and is mostly mistaken for common allergic reactions and abdominal pain. This mainly on account of the lack of knowledge among both physicians and patients about the condition. About 40% of the affected patients are diagnosed correctly with hereditary angioedema in the US and Europe. With progress in diagnostic field and different initiatives undertaken by patient bodies and industry players to spread awareness, the market for hereditary angioedema is projected to grow.
