Hesperidin is a kind of flavonoid found in citrus fruits (such as citrus, lemon or grapefruit fruit). The pure product is white needle like crystal or light yellow powder, which is difficult to dissolve in water and has a slightly bitter taste. Its melting point is 258-262 °C. It is a component of vitamin P, which can maintain the normal osmotic pressure of blood vessels, reduce the fragility of blood vessels and shorten the bleeding time. It is an effective therapeutic and preventive agent for vascular diseases caused by hypertension and arteriosclerosis. According to the different production processes, the final purity of hesperidin is significantly different. From the perspective of product purity, it can be divided into 90% - 92%, 93% - 98% and other types. In the consumer market of different product types in 2019, hesperidin with purity of 90% - 92% is more popular in the market, accounting for more than 64% of the consumption.
