A High Altitude Platform is quasi-stationary aircraft that provides means of delivering a service to a large area while staying thousands of feet above in the air for long periods of time. A HAP differs from other aircraft in the sense that is specially designed to operate at a very high altitude and is able to stay there for hours, even days. HAP enables governments to expand their defense technology portfolio and use advanced technology systems for surveillance and data relays across uneven terrains such as large water bodies which are relatively hard to reach by terrestrial towers.
