The global High Density Polyethylene market was valued at 62.63 Million USD in 2021 and will grow with a CAGR of 4.96% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

High-density polyethylene (HDPE) or polyethylene high-density (PEHD) is a polyethylene thermoplastic made from petroleum. It is sometimes called 'alkathene' or 'polythene' when used for pipes.[1] With a high strength-to-density ratio, HDPE is used in the production of plastic bottles, corrosion-resistant piping, geomembranes, and plastic lumber. Plastic packaging takes up a large volume of the high density polyethylene produced. Roughly 30% of the global packaging industry materials used is high density polyethylene (HDPE), as it is a core plastic in rigid packaging. Bags, films, containers, caps and closures, and bottles are the most common packaging products that use high density polyethylene. There is currently a very high demand for these types of packaging across the world, owing to a greater consumption of food and beverages and consumer goods. The growing importance of aesthetics is also a key factor that adds to the primary demand for HDPE. The growing demand for pipes and films in the agriculture industry is another avenue where large quantities of high density polyethylene is used. This industry is one of the larger end users of high density polyethylene and therefore, any growth in it will create a direct increase in the demand for HDPE. High density polyethylene is used in manufacturing UV protective sheets and

taraulins that offer high quality weather protection.
