The global High Frequency Inductors market was valued at 106.46 Million USD in 2021 and will grow with a CAGR of 11.79% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

High-frequency inductors consist of ceramic materials made of glass and internal/external electrodes made of silver. These inductors can be applied usefully for high frequency of 100 MHz or higher because they have high Q characteristics in high frequency, the SRF characteristics in a high-frequency band, and low resistivity. They are mainly used for impedance matching circuits in RF systems. At present, in the foreign industrial developed countries the High Frequency Inductors industry is generally at a more advanced level, the world's large enterprises are mainly concentrated in Japan. Meanwhile, foreign companies have more advanced equipment, strong R & D capability, the technical level is in a leading position. But foreign companies' manufacturing cost is relatively high, compared with Chinese companies, the manufacturing cost has competitive disadvantage, as the Chinese High Frequency Inductors production technology continues to improve, their share in the international market is increasing, competitiveness in the international market gradually increase. China's High Frequency Inductors industry has developed into a national industry with certain research and production capacity, industry product mix has gradually improved, currently China has become international High Frequency Inductors large consumption

country, but the production technology is relatively laggard. China dominates the global demand market for High Frequency Inductors and APAC is anticipated to continue increase for a foreseeable future. Murata accounted for 15.95% of the Global High Frequency Inductors sales market share in 2017. Other players accounted for 14.23%, 11.08% and 8.39% including TDK, Taiyo Yuden and Coilcraft. The market is not only influenced by the price, but also influenced by the product performance. The leading companies own the advantages on better performance, more abundant product's types, better technical and impeccable after-sales service. Consequently, they take the majority of the market share of high-end market. Looking to the future years, prices gap between different brands will go narrowing. Similarly, there will be fluctuation in gross margin. Despite the presence of competition problems, due to the global recovery trend is slightly, investors are still optimistic about this area; the future will still have more new investment enter the field.
