High intensity focused ultrasound (HIFU) is an early stage medical technology that is in various stages of development worldwide to treat a range of disorders. The mechanism is similar to using a magnifying glass to focus sunlight. Focused ultrasound uses an acoustic lens to concentrate multiple intersecting beams of ultrasound on a target. Each individual beam passes through tissue with little effect but at the focal point where the beams converge, the energy can have useful thermal or mechanical effects. As for the global High-intensity Focused Ultrasound System industry, the industry structure is relatively concentrated. For the HIFU used for disease segment, half market share in revenue is grasped by the top three manufacturers, Chongqing Haifu Medical Technology, Philips Healthcare and Changjiangyuan Technology Development, which closes to 58.36 per cent totally. The China giant Chongqing Haifu Medical Technology, which has 27.44% market share in 2015, is the leader in the High-intensity Focused Ultrasound System industry. The manufacturers following Chongqing Haifu Medical Technology are Philips Healthcare and Changjiangyuan Technology Development, which respectively has 23.39% and 7.53% market share globally. For the HIFU used for Cosmetic Segment, the top five manufacturers occupied 78% of the total market ,and

they are Ulthera, Inc, Hironic, Classys, Revyouth and WONTECH Co., Ltd.
