The global High Performance Alloys market was valued at 232.81 Million USD in 2021 and will grow with a CAGR of 1.75% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

High performance alloys is an alloy that exhibits several key characteristics: excellent mechanical strength, resistance to thermal creep deformation, good surface stability and resistance to corrosion or oxidation. The crystal structure is typically face-centered cubic austenitic. Examples of such alloys are Hastelloy, Inconel, Waspaloy, Rene alloys, Haynes alloys, Incoloy, MP98T, TMS alloys, and CMSX single crystal alloys. As a kind of advanced material, the demand of high performance alloys highly relies on the downstream demand. Aerospace is the biggest market of high performance alloys, which takes more than 54% of total high performance alloys consumption in last year. IGT (electricity) and IGT (mechanical) are also major application of high performance alloys.
