High Purity Iron is refers to metal content of iron more than 99.9% (99.95%, 99.99%, etc.). Valuable characteristics can be attained by raising the purity of iron. Products made using high-purity iron offer a wide range of advantages, including resistance to impacts, heat and corrosion, as well as magnetic characteristics. High Purity (HP) Iron are mainly classified into the following types: high purity iron billets, electrolytic iron and others. High purity iron billet is the most widely used type which takes up about 76.28 % of the total in 2016. It is produced by hot rolling method, while the electrolytic iron ones are produced by electrolytic method. High purity iron billets usually take a Fe content above 99.9%, which also called 3N product, like the HP powder, foil etc. also take a majority of Fe content at this level. The electrolytic iron usually gets a content of Fe at 3N5 and 4N, or ultra-high purity. The global high purity iron average price make a slight increase from year 2016, it will maintain the trend in the next few years, the HP iron billets` price will reach to 1797USD/MT, while the price of electrolytic iron will reached to 9715 USD/MT.
