Abstracts

The global High Speed Blowers market was valued at 73.36 Million USD in 2021 and will grow with a CAGR of 3.96% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The High-speed Blower is also called high-pressure blower. The high-speed blower has a wind pressure of 50-290 mbar under the design conditions, an air volume of 85-6000 cubic meters per hour, a rotational speed of 18000-21000 rpm, and a high air volume of 3 times. Therefore, it is also named as a high-speed fan, and the use effect is also over 95%. High Speed Blowers have an extensive application in the wastewater treatment industry. It provides high speed efficiency with low energy and maintenance costs compared with conventional blower technologies available in the market. The product is mainly divided according to its bearing technology i.e. airfoil bearing and magnetic bearing. Wastewater treatment requires mainly airfoil bearing turbo blowers as it requires continuous air flow. In the oil & gas exploration activities, magnetic bearings are utilized as they are capable of processing heavy loads with speed of more than 25,000 RPM.
