The global High-Temperature Composite Materials market was valued at 3819.88 Million USD in 2021 and will grow with a CAGR of 6.51% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A composite material is a material made from two or more constituent materials with significantly different physical or chemical properties that, when combined, produce a material with characteristics different from the individual components. High-Temperature Composite Materials are commonly defined based on their maximum application temperature with respect to the materials melting temperature, which strongly depends on the applied stress-level and the resistance to corrosive environments. The ultra-high-temperature composite materials segment is growing due to high demand from hypersonic aircrafts. The high-temperature range composite materials registered the largest market share owing to increasing demand for high-temperature composite materials from the aerospace & defense application.
