High Temperature Energy Storage is a technology that stocks high temperature energy by heating or cooling a storage medium so that the stored energy can be used at a later time for heating and cooling applications and power generation. The High Temperature Energy Storage is mainly used in the Grid Load Leveling, Stationary Storage, Concentrated Solar Power (CSP) region. The High Temperature Energy Storage belongs to a monopoly industry, only very few companies can produce. The companies are mainly concentrated in the USA and Europe. The production of North America and Europe's market share has exceeded 90% of global. The High Temperature Energy Storage has great demand in different region, but currently it mainly concentrates in the Grid Load Leveling, Stationary Storage, Concentrated Solar Power (CSP) region. Generally, this product needs import from the USA and Europe, the developing countries' consumption mainly depends on import. The High Temperature Energy Storage needs high technology content and the manufacture technology are grasped only several countries, such as USA, Germany, France, Spain. The High Temperature Energy Storage's price and gross margin are higher than other traditional product. The price is about 251.0 M USD per KW and the gross margin is higher than 28%. In the

future, the High Temperature Energy Storage will have more applications in different regions and more function, so the High Temperature Energy Storage industry will have a great increase, and the growth rate has great relationship with the technology and policy support, but the technology and downstream customer are the most important.
