## Abstracts

The global High Temperature Gasket Materials market was valued at 1940 Million USD in 2021 and will grow with a CAGR of 3.64% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Gaskets manufactured from high temperature materials are designed for applications involving, exhaust, combustible fluids, flame, and elevated temperatures. High temperature materials such as graphite, fluorosilicone, polytetrafluoroethylene, and fiberglass provide high reliability seals at high temperatures where traditional gasket materials are ineffective. High Temperature Gasket material is used for applications that will have continuous temperatures from 350°F to 2300°F. Applications with intense heat, high pressure, saturated steam or hot oils can quickly lead to gasket failure if the wrong material is designated for use.
