Abstracts

The global High Temperature Superconducting Cables market was valued at 13.63 Million USD in 2021 and will grow with a CAGR of 72.78% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Superconducting power cables act as a bridge between electric energy transmission and distribution. In a superconducting power cable, a superconducting conductor that reaches superconductivity of zero electric resistance below a specific low temperature is used, allowing low-loss transmission of large currents. As the transmission medium for HVDC applications, superconductor cables can move virtually any amount of power with much greater efficiency than any other transmission technology - and they move it underground, out of site and out of harm's way. In 2018, the Superconducting Cables consumption (sales) in Grid and Smart Grid was 460, and it will reach 22890 in 2025; while the sales market share in Grid and Smart Grid was 93.9% in 2017 and will be 94.4% in 2025. Within the next 10 years, superconducting power cables could offer significant power transmission solutions for densely populated, high load areas.
