The global HTPB market was valued at 124.97 Million USD in 2021 and will grow with a CAGR of 8.26% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Hydroxyl-terminated polybutadiene (HTPB) is an oligomer of butadiene terminated at each end with a hydroxyl functional group. It reacts with isocyanates to form polyurethane polymers. HTPB is a translucent liquid with a color similar to wax paper and a viscosity similar to corn syrup. The properties vary because HTPB is a mixture rather than a pure compound, and it is manufactured to meet customers` specific requirements. A typical HTPB is R-45HTLO. This product consists of oligomeric units typically containing 40-50 butadiene molecules bonded together, with each end of the chain terminated with a hydroxyl [OH] group: Both top-down and bottom-up approaches were used to estimate and validate the size of the HTPB market and to estimate the sizes of various other dependent submarkets in the overall market. The research study involved the extensive use of secondary sources, directories, and databases such as D&B Hoovers, Bloomberg, Chemical Weekly, Factiva, and other government and private websites to identify and collect information useful for the technical, market-oriented, and commercial study of the HTPB market.
