The global Human Chorionic Gonadotropin (HCG) market was valued at 41.41 Million USD in 2021 and will grow with a CAGR of 6.33% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Human chorionic gonadotropin (HCG) is a female hormone produced by the placenta after implantation of the egg, which is why it can be detected in a few pregnancy tests. In addition, it can be extracted from the urine of pregnant women or produced from cultures of genetically modified cells using recombinant DNA technology. The major factors that fuel the growth of the market are the rising incidence of infertility issues among men and women, along with the increasing maternity age among women. In addition, the rising preference for hormonal drug therapy supplements the market growth.
