The global Humanoid Robot market was valued at 366.93 Million USD in 2021 and will grow with a CAGR of 31.21% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A humanoid robot is a robot with its body shape built to resemble the human body. The design may be for functional purposes, such as interacting with human tools and environments, for experimental purposes, such as the study of all locomotion, or for other purposes. In general, humanoid robots have a torso, a head, two arms, and two legs, though some forms of humanoid robots may model only part of the body, for example, from the waist up. Some humanoid robots also have heads designed to replicate human facial features such as eyes and mouths. Androids are humanoid robots built to aesthetically resemble humans. The public relations application accounted for the largest share of the overall humanoid robot market in 2017. The market for the education and entertainment application is expected to grow at the highest CAGR during the forecast period. The key factor responsible for this growth is the ability of humanoids to assist and even replace teachers in classrooms, creating a buzz for modernizing schools. The market for the personal assistance and caregiving application is expected to grow at the second-highest CAGR during the forecast period.
