The global Hybrid Operating Room market was valued at 4505.04 Million USD in 2021 and will grow with a CAGR of 8.23% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A hybrid operating room is a surgical theatre that is equipped with advanced medical imaging devices such as fixed C-Arms, CT scanners or MRI scanners. These imaging devices enable minimally-invasive surgery. Minimally-invasive surgery is intended to be less traumatic for the patient and minimize incisions on the patient and perform surgery procedure through one or several small cuts. North America accounted for the largest share of the global hybrid operating room market in 2016, followed by Europe. The large share in the North American region is mainly attributed to the significant investments by hospitals to upgrade their operating rooms, coupled with the increasing number of surgical procedures and ambulatory surgery centers in the region. The Asia-Pacific region is expected to register the highest growth rate during the forecast period, due to the rapid growth in the healthcare expenditure in emerging APAC countries such as China and India, which will support the adoption of advanced surgical & diagnostic technologies in their respective healthcare systems during the forecast period.
