Hydraulic cylinders are used for creating mechanical force in a linear motion. A hydraulic cylinder is a tube capped at either end with a rod sticking out of one side. Attached to the rod, interior to the cylinder, is a piston. The piston separates the internal rod side from the internal cap side of the cylinder. Fluid is forced into either side of the cylinder to extend or retract the piston rod. The report focused on hydraulic cylinders used for small & medium-sized excavators. The Major production regions of hydraulic cylinders for small & medium-sized excavators are China, and Japan, which accounted for about 70% of production market share in 2018. For sales market, Asia-Pacific is the largest sales region with a market share of 77.58% in 2018. Hydraulic cylinders for small & medium-sized excavators manufacturers range from large multinational corporations to small privately owned companies in this industry. The leading players are KYB, Hengli Hydraulic and DY corporation. Some excavator's manufacturers are active in the OEM market while most the suppliers are independent suppliers. The market is fragmented because there are many small and local suppliers in each region though the leading five manufactures has more than 50% of the market share.
