The global Hydraulic Cylinders market was valued at 5502.74 Million USD in 2021 and will grow with a CAGR of 5.58% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Hydraulic Cylinders is a kind of hydraulic actuator which converts hydraulic energy into mechanical energy and makes linear reciprocating motion (or swing motion). It is simple in structure and reliable in operation. When it is used to realize reciprocating motion, it can avoid decelerating device, and has no transmission clearance, so it is widely used in various mechanical hydraulic systems. The output force of the hydraulic cylinder is directly proportional to the effective area of the piston and the pressure difference on both sides; the hydraulic cylinder is basically composed of cylinder barrel and cylinder head, piston and piston rod, sealing device, buffer device and exhaust device. Buffer and exhaust devices depend on the specific application, other devices are essential. The main hydraulic cylinder manufacturers in the market include Hengli hydraulic and Komatsu, and European enterprises occupy a large share in the high-end market. Domestic hydraulic cylinder manufacturers such as Hengli hydraulic, Sany Zhongxing, etc. The main consumer countries of Hydraulic Cylinders are Europe, the United States, China, Japan and other countries and regions with relatively complete industrial development system. These regions account for more than 80% of the global market in 2019. Among them, China is the world's largest consumer market, accounting for more

than 34% of the global sales market.
