Hydraulic Power Units are the main driving components of hydraulic systems. Consisting mainly of a motor, a reservoir and a hydraulic pump, these units can generate a tremendous amount of power to drive most any kind of hydraulic ram. Hydraulic Power Units are based on Pascal's law of physics, drawing their power from ratios of area and pressure. The consumption growth rate of developing countries is higher than global average growth rate. The development of Hydraulic Power Unit industry in developing country will be bright.
