Hydrogen (H₂) is an odorless, colorless and tasteless gas that is mainly produced through natural gas steam reforming or the electrolysis of water. Lighter than air, it burns with an invisible, clean (carbon-free and soot-free) flame. It is the only fuel gas that does not contain any carbon atoms. Hydrogen downstream is wide, the major fields are general industry, metal working, refining and chemical. The metal working sector is the most important hydrogen consumer (accounting for 40.83 % of the market share, followed by the chemical sector, which accounts for 29.89% of the market share. As overall economic downward trend in China and complicated international economic situation in the world in the past few years, there will be many uncertainties in the next few years. In addition, in the world market of hydrogen, supply has been in relative large in the past few years. According to our research and analysis, manufacturers from Europe and USA are the major leaders in the international market of hydrogen. With the development of Chinese hydrogen production technology, their share in the global market is increasing, and competitiveness in the global market gradually increases.
