Abstracts

The global Hydrogen Storage market was valued at 500.62 Million USD in 2021 and will grow with a CAGR of 6.85% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Methods of hydrogen storage for subsequent use span many approaches including high pressures, cryogenics, and chemical compounds that reversibly release H₂ upon heating. Underground hydrogen storage is useful to provide grid energy storage for intermittent energy sources, like wind power, as well as providing fuel for transportation, particularly for ships and airplanes. The cylinder segment is estimated to be the largest storage type segment during the forecast period because of the rise in demand from end-use applications, such as metal working, food, and electronics industries.
