### Abstracts

The global Hydrogen Sulfide market was valued at 80.97 Million USD in 2021 and will grow with a CAGR of 3.95% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Hydrogen sulfide is a colorless, flammable, extremely hazardous gas with a 'rotten egg' smell. It occurs naturally in crude petroleum, natural gas, and hot springs. In the report, we count hydrogen sulfide existing as a liquid compressed gas. We mainly cover high purity hydrogen sulfide. Hydrogen sulfide is used as a dopant for indium phosphide and gallium arsenide semiconductors, and as a precursor for the growth of zinc sulfide semiconductors, also used as an analytical reagent in chemical analysis and as an odourant in town gas. Hydrogen sulfide is used for metal separation, removal of metallic impurities and for preparation of metallic sulfide. Hydrogen sulfide is used in calibration mixtures for the petrochemical industry and emission control applications. The demand for hydrogen sulfide is expected to continue increasing during the remaining years of the forecast period of 2018-2023. Hydrogen sulfide industry will usher in a stable growth space.
