Abstracts

The global Hydrogenated Diamond-Like Carbon Coating(DLC) market was valued at 132.45 Million USD in 2021 and will grow with a CAGR of 5.68% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

For DLC classification, it organized DLC types on a pseudo ternary phase diagram and clarified the relationship with deposition methods. DLC films formed with the sputter vapor deposition method and arc PVD method do not contain hydrogen as long as only solid graphite is used as the raw material and no hydrocarbon gas is used. They are characterized by the differences in the amount of sp³-bonded carbon and the structure of the cluster within the range from graphite-like carbon (GLC) that does not contain hydrogen and amorphous carbon (a-C) to tetrahedral amorphous carbon (ta-C). On the other hand, DLC films produced from a hydrocarbon gas using the plasma CVD method always contain hydrogen. These DLC films take the form of hydrogenated amorphous carbon (a-C:H) to hydrogenated tetrahedral amorphous carbon (ta-C:H), which are characterized by the differences in the amounts of hydrogen and sp³-bonded carbon. Thus, DLC is distinguished by the amounts of hydrogen and sp³-bonded carbon, and the cluster structure, which provides information for understanding various behaviors including mechanical (hardness and Young`s modulus), optical (refraction, penetration/absorption), electric (conductance), and chemical (changes during an increase in

temperature, oxidation, affinity with various materials) behaviors. Hydrogenated diamond-like carbon coating is the major type of DLC which takes more than 80% of all DLC market. In 2017, the global Hydrogenated diamond-like carbon coating market is led by Europe, capturing about 62.56% of global diamond-like carbon coating production. North America is the second-largest region-wise market with 20.70% global production share.
