Hydrogenation catalyst is a type of catalyst that is to treat with hydrogen - is a chemical reaction between molecular hydrogen (H₂) and another compound or element, usually in the presence of a catalyst such as nickel, palladium or platinum. The process is commonly employed to reduce or saturate organic compounds. Hydrogenation typically constitutes the addition of pairs of hydrogen atoms to a molecule, often an alkene. Catalysts are required for the reaction to be usable; non-catalytic hydrogenation takes place only at very high temperatures. Hydrogenation reduces double and triple bonds in hydrocarbons. Hydrogenation catalyst is a high technical barrier market with limited suppliers. Market concentration is high. The top 3 players Advanced Refining Technologies (ART), Albemarle and Criterion takes a combined global market share of 44.84% in 2017. Other suppliers like Haldor Topsoe, UOP (Honeywell) and Sinopec takes a smaller share in the market.
