The global Hydronic Control market was valued at 2627.17 Million USD in 2021 and will grow with a CAGR of 2.49% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Hydronics is the use of a liquid heat-transfer medium in heating and cooling systems. The working fluid is typically water, glycol, or mineral oil. Some of the oldest and most common examples are steam and hot-water radiators. Historically, in large-scale commercial buildings such as high-rise and campus facilities, a hydronic system may include both a chilled and a heated water loop, to provide for both heating and air conditioning. Chillers and cooling towers are used either separately or together as means to provide water cooling, while boilers heat water. A recent innovation is the chiller boiler system, which provides an efficient form of HVAC for homes and smaller commercial spaces. North America is likely to account for the largest share of the overall hydronic control market throughout the forecast period. Continuous growth in construction and renovation of residential and commercial buildings are among the major factors supporting the growth of the hydronic control market, along with the increasing adoption of IoT in smart housing. Government regulations regarding environmental safety and water quality are also among the major drivers for the growth of the hydronic control market in North America.
