The global Hydrophilic Coatings market was valued at 8188.07 Million USD in 2021 and will grow with a CAGR of 6.27% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Hydrophilic coatings are coatings that exhibit water attracting properties by participating in hydrogen bonding with water. Hydrophilic coatings are wettable and lubricious and can be applied to a variety of surfaces and materials. These coatings are generally ionic and negatively charged which aides in the formation of hydrogen bonds with water. In medical devices, hydrophilic coatings are used to create lubricious surfaces which reduce the trauma and irritation caused by the insertion of a medical device into the body. Hydrophilic coatings also help prevent bacterial colonization of the medical device and thus help to reduce the possibility of infections. Medical sector is expected to have the highest demand for hydrophilic coatings in the coming years owing to its requirement in medical devices. There has been a massive increase in the expenditure on high-end medical devices due to the continuous need for proper medical and healthcare facilities, increasing health awareness and ageing population.
