The global Hydroxyisobutyric Acid market was valued at 8.21 Million USD in 2021 and will grow with a CAGR of 4.1% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Hydroxyisobutyric acid is commonly known as HIBA or Acetonic acid. Hydroxyisobutyric acid can be used for the synthesis of polymer, resins, adhesives, etc. and acts as a thickening agent in paint, or ink additive and cosmetics, emollient and skin conditioning agent in skin care and cosmetic products as well as in numerous pharmaceutical drugs. Nowadays, industries are shifting towards eco-friendly manufacturing and the renewable biomass is used for the production of many green chemicals through environment friendly processes. In future, Hydroxyisobutyric acid may be the raw material for chemical industries, which are now dependent on petroleum. Hydroxyisobutyric acid possesses antimicrobial properties and hence, it is an important constituent in the synthesis of penicillin G salt. Hydroxyisobutyric acid is also used for the manufacturing of isochromanones, which is used in a wide variety of pharmacological activities. Hydroxyisobutyric acid is considered as a building block of polymer synthesis. Hydroxyisobutyric acid finds its applications as a processing agent for rubber, as an oiling agent for textiles, as a flavouring agent in food industry and lubricant for plastics. Hydroxyisobutyric acid is also used as an electrolyte for detection and separation of the metal ions by on-line cyclic voltammetry. Now, the production of polymers and other

materials are mainly done from fossil feedstock i.e. petroleum-based hydrocarbons. 2-hydroxyisobutyric acid (2-HIBA) can be a substitute to these petroleum based hydrocarbons. Based on the product type, the Hydroxyisobutyric Acid is primarily split into 50% HBA Solution, 98% HBA, etc. Hydroxyisobutyric Acid market is sub-segmented into several major application, like Electronic Materials, Pharmaceuticals, etc.
