## Abstracts

The global Hygiene Nonwoven market was valued at 887.24 Million USD in 2021 and will grow with a CAGR of 4.82% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Hygienic non-woven fabrics can be subdivided into baby diapers, feminine hygiene napkins and diapers for adult urinary incontinence patients. Due to population growth, changes in population distribution, improved living standards and changes in consumer attitudes towards disease health care, there will be a large market for diapers and feminine hygiene products. The use of medical protective clothing has been more than 100 years old, initially to prevent microbes from invading the sterile operating room and protecting patients from bacterial infections carried by medical personnel. After the 1980s, as medical personnel were at risk of infection at any time during surgery, the main role of medical protective clothing began to change to prevent the penetration and spread of viruses in the blood. In recent years, in order to prevent indirect infection and cross-infection of viruses caused by bacterial penetration, the requirements for medical protective materials are getting higher and higher. The research on medical protective equipment in developed countries such as Europe, America and Japan started earlier. Materials used for medical treatment, especially surgical gowns, surgical drapes and gowns, were gradually over-distributed to disposable materials. China is currently the largest production and processing base for disposable surgical gowns and protective

clothing. The disposable surgical gowns used in the world, 60% of which are produced and processed in China, various materials such as polypropylene spunbond, spunlace and SMS non-woven. The performance difference of the cloth is large. The exported surgical gown usually needs to be post-fluoride finishing, so that it has the functions of waterproof, anti-static, anti-blood, anti-alcohol, anti-gasoline, anti-bacterial, anti-microbial and anti-fouling, and achieves the effect of shielding protection.
