The rotary lobe pump is excellently suited for pumping low to high viscosity media of all kinds. The application ranges from pure product transfer to the feeding of filters and filling systems and other applications. Liquid containing sensitive solids, such as quark, can be conveyed through the special shape of the rotors without damaging the product. Popular applications for rotary lobe pumps, especially in all-metal design, are the food, pharmaceutical, Personal Care and chemical / biochemical industries. In this industries the pumps are subject to high hygiene and cleanability requirements inside the pump and the housing, as this sensitive environment allows no contamination and the media must be specially protected to prevent the growth of bacteria and pathogens. Among the different types of hygienic rotary lobe pump, the up-to-100 m³/h type held the maximum market share with about 51% in 2019. According to regions, Asia-Pacific dominated the entire market of the hygienic rotary lobe pump with about 43% of the global market share in 2019, much more than other regions.
