Abstracts

The global Hyperspectral Imaging Systems market was valued at 83.11 Million USD in 2021 and will grow with a CAGR of 10.42% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Hyperspectral imaging, like other spectral imaging, collects and processes information from across the electromagnetic spectrum. The goal of hyperspectral imaging is to obtain the spectrum for each pixel in the image of a scene, with the purpose of finding objects, identifying materials, or detecting processes. There are two general branches of spectral imagers. There are push broom scanners and the related whisk broom scanners, which read images over time, and snapshot hyperspectral imaging, which uses a staring array to generate an image in an instant. In 2018, North America is expected to account for the largest share of the global market. However, the Asia-Pacific region is expected to grow at the highest CAGR during the forecast period. The market for hyperspectral imaging systems is expected to grow in emerging economies in APAC as they have a growing number of manufacturing bases. These cameras are used for homeland surveillance, spaceborne applications, agriculture and mineral surveillance, and other research activities requiring constant spectral vigilance.
