Abstracts

The global Ice Hockey Equipment market was valued at 734.16 Million USD in 2021 and will grow with a CAGR of 2.56% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Specialized equipment is used by ice hockey players for both facilitating their game play and for protection purposes, as ice hockey is a sport wherein injuries are common. This equipment is used by players for protecting their bodies from fractures and bruises. Helmet, neck guard, shoulder pads, elbow pads, hockey jersey, hockey gloves, hockey pants, jockstrap, shin guards, mouth guard, and ice skate are the products that come under the purview of ice hockey equipment. One of the factors contributing to the growth of the market is the changing rules of protective goalie gear. The NHL recently changed the length of a goalie's leg pads; making them shorter, so they do not obstruct a significant part of the five-hole between the legs. In the future, goalies will be required to wear equipment like chest guards, catch gloves, and blockers that are better suited to their body size. Such changes in the rule will require goalies to buy gear matching their body sizes rather than using the standard oversized equipment.
