Abstracts

The global Ice Protection Systems market was valued at 7558.05 Million USD in 2021 and will grow with a CAGR of 4.03% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Ice protection systems are designed to keep atmospheric ice from accumulating on aircraft surfaces (particularly leading edges), such as wings, propellers, rotor blades, engine intakes, and environmental control intakes. If ice is allowed to build up to a significant thickness it can change the shape of airfoils and flight control surfaces, degrading the performance, control or handling characteristics of the aircraft. An ice protection system either prevents formation of ice, or enables the aircraft to shed the ice before it can grow to a dangerous thickness. The ice protection systems market in Europe is expected to witness the highest growth during the forecast period, as countries in Europe have been increasing their commercial fleet size due to increased air travel and passenger traffic and defense spending to strengthen their battle operational capacity. This is expected to consequently lead to increased demand of ice protection systems in the region.
