ITP (idiopathic thrombocytopenic purpura) is a rare disease with low affliction rates. This disease leads to excessive bruising or bleeding due to the lack of blood platelets. It is also known as immune thrombocytopenia and can affect children and adults alike. Increasing demand for combination therapies therapy is expected to fuel the future growth of the ITP therapeutics market. Clinical evidence suggest that combination therapies entail relatively lower side effects, are cost effective and display higher response rates in patients.
