The global Imaging Radar market was valued at 976.93 Million USD in 2021 and will grow with a CAGR of 6.61% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Imaging radar is a subset of radar. Its name comes from its high angular resolution, which can provide clear images. Angular resolution is the ability to distinguish objects within the same range of distance and relative velocity, and recognize static objects at high resolution. Imaging radar is considered to be a comprehensive cost performance advantage that will have more cost and performance than other sensors. In some cases, imaging radar may identify objects on the road, such as bicycles, people or small obstacles. At the same time, it has the traditional advantages of dealing with bad weather conditions, which, at least so far, camera, ultrasonic and lidar can't do. Global Imaging Radar key players include Continental, ZF Friedrichshafen, Veoneer, etc. Global top three manufacturers hold a share over 65%. North America is the largest market, with a share about 37%, followed by Europe and China, both have a share about 35 percent. In terms of product, Millimeter-Wave Imaging Radar is the largest segment, with a share over 95%. And in terms of application, the largest application is 2D Imaging, followed by 3D Imaging.
