Abstracts

The global Immersive Simulator market was valued at 2812.96 Million USD in 2021 and will grow with a CAGR of 19.02% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Immersive simulator-based emergency services help in improving safety in industrial performance by preventing catastrophes, reducing maintenance costs, and decreasing the release of waste material in the environment, thereby increasing the production throughout. As emergency situations such as oil spills, fire breakout, or any other disaster can occur in a process plant, field operating training is provided to plant operators to prevent or address such situations. The use of immersive simulators for training helps operators to make better decisions in emergency scenarios, ensures more stability, and lowers the risk of accidents and hazardous impact on the environment. The immersive simulator market for the oil and gas industry held the largest market share among all industries. Immersive simulator offers the capability to see through solid structures for maintenance and inspection requirements in the oil and gas industry. Moreover, for the safety of the people working in a refinery, proper training in the operations of the assets in the plant has to be provided. This is driving the growth of the market for immersive simulators.
