### Abstracts

The global In-Mold Coatings market was valued at 8792.32 Million USD in 2021 and will grow with a CAGR of 4.01% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The in-mold coating (IMC) process incorporates coating into the molding process. This process reduces the amount of solvents needed and provides beneficial environmental impacts. The use of IMC with injection-molded parts has the potential for reducing, or eliminating, the volatile organic compounds associated with the painting process. To date, the IMC process has been successfully applied to sheet molding compound compression-molded parts to provide a primed surface that can then be electrostatically painted in a separate process. In-mold coatings have been finding significant applications in automotive and buildings and constructions, sanitary products, etc. APAC and Europe are key regions in terms of the industrial sectors at a global level and are anticipated to grow further in the near future with regard to the industry, which in turn, is expected to create significant opportunities for growth of the regional in-mold coatings market over the forecast period.
