Abstracts

The global In-wheel Motors market was valued at 11.96 Million USD in 2021 and will grow with a CAGR of 31.33% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

In-wheel motors allow torque to be applied at the wheel; the point where the torque is required. In-wheel motors occupy the most unobtrusive space inside the vehicle, leaving more volume inside the vehicle body for batteries and luggage. Direct-drive, in-wheel motors require no gearboxes, driveshafts or differentials, thus giving far greater flexibility to vehicle designers while substantially reducing drivetrain losses. The reduced drivetrain losses mean less energy is wasted (during both acceleration and regenerative braking), resulting in more of the energy from the battery pack being available to propel the vehicle. Each in-wheel motor can be controlled entirely independently, providing far greater control, performance and vehicle dynamics characteristics than any other drive system; traction control, launch control and torque vectoring are all easily implemented through the use of in-wheel motors. The classification of In-wheel Motors includes Outer Rotor Type and Inner Rotor Type. The proportion of Outer Rotor Type in 2016 is about 96.94%, and the proportion is in increasing trend from 2012 to 2016 as the outer rotor is generally applied in the electric vehicles. With more and more companies built plants here, China is the largest supplier of In-wheel Motors, with a production market share nearly 59.61% in 2016. With mature

technology, Europe is the second largest supplier of In-wheel Motors, enjoying production market share nearly 33.80% in 2016. With rapid growing electric vehicle industry, China is also the fast growing consumption place, with a consumption market share nearly 33.27% in 2016. With a lot of automotive and parts manufacturers, Europe is the largest consumption place with the consumption market share of 44.28%.
